Installation of steam boiler and oil-burning equipment including enclosed
inside fuel oil tank for Dartmouth Real Estate by Fels Company

August 12, 1959

The Fels Company
42 Union Street, Att: Mr. Dutton

Cc to: Dartmouth Real Estate
292 Baxter Blvd.

Gentlemen:

Building permit for the above work, and also a separate construction permit
for making certain minor alterations in the wall of the Boiler Room, are issued to
you, herewith, subject to the following:

It is understood that you plan to support the fuel oil tank from 2 to 4 inches
above the floor of the coal bunker without the use of sand beneath the tank; and that
these supports will be either structural steel or masonry which will run either the
length of the tank or the width of the tank but in any case these supports will be
directly beneath the structural members inside of the tank and there will also be
such supports under both ends or under both sides of the tank according to which di-
rection these supports are run. It is to be understood that if the owner prefers to
have the uniform sand fill beneath the tank, that is allowable; but it should also
be understood that in some quarters such sand fill under the tank is considered
harmful to the life of the tank.

To afford additional strength each one of the vertical angles inside of and
at each end of the tank are to be extended to the bottom plates and welded there.
Also the diagonal angles at the bottom of each cross bent are to be shortened and
fastened closer to the lower corner of the tank to afford additional strength to the
vertical angles in the side walls.

The so-called "sleeve", forming a well between the manhole in the tank and the
manhole in the driveway, is to be formed of heavy gauge steel, is to be welded to the
top of the tank, and is to be made tight against the underside of the driveway slab
preferably by connecting the metal of the sleeve to the metal forming the manhole
frame in the slab - thus preventing exposure of any person opening the manhole in
the driveway, to any oil fumes which may exist between the tank and masonry vault.

The manhole cover in the driveway slab is to be fastened down in some suitable
manner.

Welding is to be done only by operators which hold effective certificates from
this department issued within one year of the date of doing the welding.

It is understood the plans may be revised to show some of the above features,
and that prints of the revised plans will be filed here so that our record may be
complete for the later benefit of the owner.

(INSPECTION COPY)

April 27, 1929

Mr. F. A. Rumery, Pres. The Dartmouth Real Estate Co.
533 Forest Avenue
Portland, Maine

My Dear Mr. Rumery:

Chief Sanborn of the Fire Department has reported to me that there are no fire extinguishers whatever in the Dartmouth Real Estate apartment houses out at Ricker Park.

Section 60 of the Building Code under the head of "Apartment Houses" provided that there shall be at least one fire extinguisher in each story and basement of each section separated from the other parts by solid walls or partitions, to each 2500 square feet of floor area, or portion thereof.

Will you be kind enough to provide these fire extinguishers as required, as soon as possible, so that the buildings may fully comply with the regulations.

Any type of extinguisher approved by the Chief of the Fire Department is satisfactory, and these may be secured in the small hand size with brackets to fasten upon the wall, so that while they are not conspicuous, they are always at hand in case of emergency.

Very truly yours,

Inspector of Buildings.

Portland, Maine

Gentlemen:

Enclosed is the building permit covering erection of your apartment house unit No. 4 in the Forest Avenue development. Your Mr. Bowdoin has made the following arrangements with this office concerning some questions about the plans which it is understood are to be taken care of during construction.

One living room in the B section and the corresponding section opposite shows on the plans to be 20 feet in depth from the nearest windows, and Mr. Bowdoin has arranged to make these rooms 10 feet and 9 inches in depth to comply with Section 54 of the Building Ordinance. In this connection, he stated that the height of the window heads of all windows in this building have been changed so as to be 7 feet and 6 inches above the floor.

It is not clear on the plans that there is to be at least 3 feet between the bottom step at the landing of the service stairs and the corner of the incinerator chimney. This is to be made at least 3 feet in the clear.

Mr. Bowdoin has agreed to have all of the cellars ^{stairs} except those in Sections A and C enclosed as required in Section 57 of the Building Ordinance, and he understands that the fire doors at the bottom are to be provided with a self-closing device acting to keep the doors closed at all times.

Fire extinguishers will be required within the building upon each floor and basement to every 2500 square feet of floor area or fraction thereof between unperforated fire walls.

Mr. Bowdoin's attention was called to the 6 x 12 timbers on 10 foot and 6 inches span under stair hall partitions which promise to be overloaded 20 to 30 percent and the 4 x 12 girders under the private hall partitions that are on 13 foot span which promise to be overloaded about this same amount, and he agreed to make whatever changes are necessary to

APPLICATION FOR PERMIT
Class of Building or Type of Structure Second Class

Permit No. 653
APR 28 1928

To the INSPECTOR OF BUILDINGS, PORTLAND, ME.

Portland, Maine, April 20, 1928

The undersigned hereby applies for a permit to erect ~~alter~~ ^{install} the following building structure ~~equipment~~ in accordance with the Laws of the State of Maine, the Building Code of the City of Portland, plans and specifications, if any, submitted herewith and the following specifications:
