Portland, Maine

Dear Sir:

Referring to your application for a building permit to change the use of a small store at 7 Alba Street to a one car private garage, it appears that the building is located very close to a wooden dwelling upon the same lot. Inasmuch as this is the case, it will be necessary for you to protect the inside walls of the garage in every place where the inside of these walls is closer than 5 feet from the nearest part of the wooden dwelling as directed in Section 50 of the Building Code. In this section, two different materials are permitted for this protection, first metal lath and cement plaster and as an alternate so called asbestos lumber at least 3/8 of an inch thick and well cemented at the joints.

This permit is being sent to the Fire Chief for approval. Please notify this department at once just what part of the inside walls you propose to protect, and what material you propose to use. It is necessary that we know this before the permit is actually issued.

Very truly yours,

Inspector of Buildings
