INTER-OFFICE CORRESPONDENCE

CITY OF PORTLAND, MAINE  
BUILDING INSPECTOR

To: George H. May,  
Commissioner of Public Works

From: Warren McDonald  
Inspector of Buildings

Subject: Moving building from 164 Caleb Street to outside City

We have application for permit to move 2-car frame garage x 20',  
one story high  
as above.

We are checking the proposition against Zoning Ordinance and  
Building Code and will delay issuance of the permit until we hear from  
you that the permit for moving through the streets is cleared sufficient-  
ly. When that point is reached, will you be kind enough to write "OK  
to issue building permit" on the bottom of this memorandum and return.

*Warren McDonald*  
Inspector of Buildings

OK to issue permit

P.36/1114-I

September 1, 1938

Mr. C. R. Farson,  
21 Rosemont Avenue,  
Portland, Maine

Dear Sir:

Enclosed is the certificate of occupancy covering your dwelling house now under construction at 162-164 Galeb Street.

I have delayed issuing this certificate because of a questionable condition as regards the closeness of the warm air pipes in the cellar to the combustible ceiling above. The inspector from this office reports that these warm air pipes without protective covering have been placed directly against the combustible wall-board ceiling. The Building Code has no specific prohibition of this arrangement, except the requirement that all hot air pipes shall be covered with fourteen-pound asbestos or equivalent. He has been accustomed to issue this requirement with regard to warm air pipes exposed in the cellar provided the metal pipe was at least one inch removed from any combustible material. If it turns out that the inspector's opinion is correct and the wallboard on the ceiling is burnable, the installation apparently does not satisfy the Building Code.

I have investigated some other authorities concerning the safety of such an arrangement and I find that the National Fire Protection Association recommend six inches from such a pipe to any woodwork unless specially protected, and that the National Board of Fire Underwriters' (I think the National Warm Air Heating and Ventilating Association concurs in the National Board recommendations) stipulate that warm air pipes leading from the furnace shall not be placed nearer than one inch to woodwork unless such woodwork is covered with asbestos paper and the paper covered with tin or iron.

This matter is called to your attention not with the intention of applying any hard and fast regulation to your installation, but with the thought that if there is any possible hazard present, you should be fully advised of it at the time the certificate of occupancy is issued. If you are able to establish that the board on the ceiling is incombustible, will you be kind enough to so advise me and also the trade name and manufacturer of the board. If it turns out that the board is combustible, the Building Code may be satisfied either by insulating the pipes at least one inch or by substituting non-burnable board for the present board in those parts of the ceiling where the pipes have contact.

Mr. C. R. Eason-----2

September 1, 1956

The inspector also noted that the fire door between the garage part and the house had not been made self-closing. The Building Code requires that this door be self-closing, in other words a fire door which is normally closed and kept closed by a suitable door check, spring or other approved device. Please see that this detail is taken care of.

Very truly yours,

Inspector of Buildings

September 1, 1936

Mr. C. R. Esson,  
21 Pleasant Avenue,  
Portland, Maine

Dear Sir:

Enclosed is the certificate of occupancy covering your dwelling house now under construction at 162-164 Galeb Street.

I have delayed issuing this certificate because of a questionable condition as regards the closeness of the warm air pipes to the ceiling in the combustible ceiling above. The inspector from this office reports that these warm air pipes without protective covering have been placed directly against the combustible wall-board ceiling. The Building Code has no specific prohibition of this arrangement, except the requirement that all hot air pipes shall be covered with fourteen-pound asbestos or equivalent. We have been accustomed to ignore this requirement with regard to warm air pipes exposed in the ceiling provided the metal pipe was at least one inch removed from any combustible material. If it turns out that the inspector's opinion is correct and the wallboard on the ceiling is burnable, the installation apparently does not satisfy the Building Code.

I have investigated some other authorities concerning the safety of such an arrangement and I find that the National Fire Protection Association recommends six inches from such a pipe to any woodwork unless specially protected, and that the National Board of Fire Underwriters' (I think the latter) stipulate that Ventilating Association concur in the National Board recommendation that warm air pipes leading from the furnace shall not be placed in contact with woodwork unless such woodwork is covered with asbestos paper covered with tin or iron.

This matter is called to your attention not with the intention of applying any hard and fast regulation to your installation, but with the thought that if there is any possible hazard present, you should be fully advised of it at the time the certificate of occupancy is issued. If you are able to establish that the board on the ceiling is incombustible, will you be kind enough to advise me and also the trade name and manufacturer of the board. If it turns out that the board is combustible, the Building Code may be satisfied either by lowering the pipes at least one inch or by substituting non-burnable board for the present board in those parts of the ceiling where the pipes have contact.

Mr. C. R. Eason—2

September 1, 1936

The inspector also noted that the fire door between the garage part and the house had not been made self-closing. The Building Code requires that this door be self-closing, in other words a fire door which is normally closed and kept closed by a suitable door check, spring or other approved device. Please see that this detail is taken care of.

Very truly yours,

Inspector of Buildings
