ARTICLE OF INCORPORATION  
 AND BY-LAWS OF THE CITY OF PORTLAND, MAINE  
 AS AMENDED TO DATE OF CLOSING BY THE CITY

P. 53/1736-I

1-3-43-H

December 22, 1933

Mr. H. G. Ireland,  
617 Washington Avenue,  
Portland, Maine

Dear Sir:

The pipe covering used on the new steam heating system which you have installed for Mr. John J. Whittier at 73 Bradley Street is of the new type having a glossy finish, and we are unable to approve such pipe covering wherever it is closer than 12 inches to a heater or smokepipe because the finish of this covering is combustible threatening the catching and spreading of fire, if the heater or smokepipe becomes overheated.

Please have all sections of this pipe insulation closer than 12 inches to the heater or smokepipe removed without delay. Of course asbestos cement or a type of covering having a thoroughly non-combustible surface or jacket may be used.

So far as we know there are two types of this glossy finish covering on the market, and one of them is far more combustible than the other, but both of them are finished with some type of burnable enamel or similar material. We can appreciate from the standpoint of the owner the desirability of having pipes in a cellar those days as presentable as possible, but there can be little doubt that the Building Code is right in holding that safety from fire is more important than appearance.

Very truly yours,

W McD/H

File: Rept. 3285B-I

May 24, 1937

Mr. John J. Whittler,  
79 Bradley Street,  
Portland, Maine

Dear Sir:

I am sorry to have been so long in attending to the matter of your garage at 79 Bradley Street, but the rush of other work has made it impossible to attend to it sooner.

I was able to examine the building on Saturday, and if you will sign the original of the attached specifications and return to this office, I think we will be able to issue the permit at once. The copy of the specifications is for your information and you may retain it. Please note what you are signing as we shall, of course, expect you to live up to it.

Very truly yours,

Inspector of Buildings

McD/H

SPECIFICATIONS ACCOMPANYING APPLICATION FOR BUILDING PERMIT OF JOHN J. WHITTIER  
TO COVER RELOCATION AND STRENGTHENING OF EXISTING GARAGE AT 72 BRADLEY STREET

May 26, 1937

1. These specifications are to be considered as much a part of the application for the building permit as though written on the application form, but failure to mention any requirement of the Building Code or Zoning Ordinance herein shall not relieve either owner or contractor from compliance therewith.

2. The owner will provide cedar post foundation beneath the garage in its new location, the posts to extend to at least four feet below the grade of the ground and to be located as follows, - one at each corner of the garage, one in the center of the back wall, two beneath each side wall spaced uniformly six feet from center to center and one under each jamb of the large doors, making 11 posts in all, it being understood that ~~no~~ many posts are necessary because the size of the sill is below the usual size required by the Building Code.

3. The existing studs in the outside walls are 2x4 and spaced from 24 inches to 30 inches from center to center. Additional studs will be provided extending from sill to plate between existing studs so that in no case will any of the studs in the outside walls be more than 24 inches from center to center.

4. The corner posts which are now of varying sizes will be strengthened, if necessary, to make them equivalent to 4x4 corner posts.

5. New 2x4 rafters will be provided extending from plate to ridge between each pair of existing rafters, thus making the rafters about 15 inches from center to center and some arrangement will be adopted at the ridge to approximate a ridge board. A tie of 2x4 will be provided at every other pair of rafters securely fastened to one plate and the rafter and extending all one length across the building and fastened to the other plate and the opposite rafter.

6. Wherever bulges exist in the present side walls, the bulges will be taken out, even if it is necessary to remove the studs and rebuild the wall at this point, and the wall will be strengthened sufficiently to make the entire building plumb and square.
