STATEMENT ACCOMPANYING APPLICATION FOR BUILDING PERMIT parage and dwelling mate 6/23/53 62-68 Cobb Ave. 1. In whose name is the title of the property new recorded? Levis U. Weeks 2. Are the boundaries of the property in the vicinit f the proposed work shown clearly on the ground, and how? stakes 4. What is to be maximum projection or overhang of eaves or drip? ___ 5. To you assume full responsibility for the correctness of the location plan or statement of location filed with this application, and does it show the complete outline of the proposed work on the ground, including bay windows, porches and other projections? 6. Do you assume full responsibility for the correctness of all statements in the application concerning the sizes, design and use of the proposed building? 7. Do you understand that in case changes are proposed in the location of the work or in any of the details specified in the application that a revised plan and application must be submitted to this office before the changes are made? are made? 10

AP 62-69 Cobb Ave.

June 23, 1953

Copy to: Health Officer

Hr. Lewis C. Weeks, 5 Johnson Road

"par Mr. Weeks:

Application today by you to construct a dwelling at 62-68 Cobb Avame indicates that no connection is possible to a public sever, and that sawage disposal is proposed by septic tank.

The Puilding Code directs, where connection to a public sever is not possible, that the proposed method of sewage disposal must be approved by the Fealth Officer before any cuilding permit is issued.

That the "calth Department may be aware of the proposed method of sowage disposal, you should explain, by plan or otherwise, the details and location of the septic tank system, including nature of the soil where overflow lines will be located, to test tary Engineer Norman Winch.

Yery truly yours,

WPcD/H

Inspector of Duildings

AP 62-68 Cobb Ave.

July 21, 1953

Mr. Lends C. Weeks 5 Johnson Boad

Dear Kr. Weekst-

While we are unable to issue a permit for construction of a single family itselling 32 feet by 36 feet on the lot at 62-68 Cobb Ave. until approval of sewage disposal has been received from the Health Department, we have checked the plans filed with the application for permit and found questions concerning compliance with Building Code requirements as listed below. It is necessary that the plans be revised to show compliance and that fresh prints be filed with all information thereon printed from the originals. Details in question are as follows:-

- 1. There appears to be some confusion as to the direction in which the first and second floor joists are to run. While on the basis of construction shown on the plan the maximum span of first floor timbers is about 12 feet, the application indicates that it will be 14 feet. $-\bigcirc \mathbb{R}$
- 2. A section taken through the building shows the second floor joist running from front to rear of the building, but if they are framed in this manner, there will be no adequate support for them at the center of the building if the first floor is framed as indicated on the plans. If the second floor joists are run the long way of the building, the same direction as those in the first floor are indicated on the plans, there is a quention of how they will be adequately supported across the living room. O
- 3. What is the framing of the floor of the open rear pack to be and what is to be provided for a plate for support of main roof rafters across the open a where porch is located?
- 4. There is indication marked in ink on the plan that the space beneath the front vestibule is to be excavated. In such a case the foundation wall will need to be of the same thickness and depth below grade as that for the rest of the building. Presumably ne wall will be provided between 'his space and the main cellar so that a girder will, be needed for support of wall and roof loads across this opening. What will you use?— O. K.
- 5. If second floor tembers are to run parallel to front and rear walls, how will a tie across the building be provided?
- 6. No note that the application indicates that the rifters are to so 2x3 spaced 24 inches on centers instead of the 2x6 shown on the plan. Since these rafters are to be on a horizontal span of about 17 feet, even 2x8's will not figure out if they are of spruce or hemlock lumber. If 2x8's of Douglac Fir lumber used they will need to be spaced no more than 20 inches on center. What will you use?
- 7. Is there to be a platform and steps outside the side untrace? If so, what are the foundation and framing to be? ON

Yery truly yours,

Warren KcDonald Imprector of Buildings
