Mr. R. O. P. Sellers
462 Capisic Street
Portland, Maine

Subject: Building permit to cover construction of
enlargement of one story open piazza and glassing
in entire piazza

Dear Sir:

There are a number of details in your application for the permit which would not satisfy requirements of the Building Code to which you would be bound by acceptance of the building permit, but I had decided to issue the permit with a letter explaining these discrepancies and then noticed that you had given as estimated cost only \$75. No doubt you gave this figure not realizing that the Building Code provides that the estimated cost shall include all labor and material going into such a structure, including the owner's own labor, any material that the owner may have on hand and second hand material used, all at reasonable market prices at the time of the construction work. It seems obvious that if you include everything, the total cost would far exceed \$75. If you, therefore, please furnish a new estimate of cost on this basis of including everything and indicate to me that you understand the provisions of this letter as to details of construction and will go by them, pay the slight additional building permit fee, and I will be able to issue the permit. If you insist that \$75 is the correct estimate, please furnish detailed figures as to hours of labor, quantities of material and unit prices for the same to support your estimate, as I am required by law to be able to justify in a reasonable measure the estimated cost under which I issue permits.

As to the details of construction:

1. The 2x4 roof joists or rafters on the span of eight feet not strong enough, and you have not given the spacing center to center. No less than 2x6 should be used, but they may be spaced 24 inches from center to center.
2. Apparently you intend to run the 2x6 floor joists out from the house toward the outside of the piazza. Thus, the 4x6 sills spanning between the cedar posts would have to support half of the weight of the floor, half the weight of the roof and all of the weight of the solid wall beneath the windows, the windows and the construction work between them. As I understand your sketch, you have shown only the 14-foot extension which is to lengthen the piazza from 18 feet to 32 feet. On the sketch you show a cedar post at the outside corners of the proposed extension, and one cedar post under the center, thus indicating that the 4x6 sills, set with the 6-inch dimension upright, would be on a span of 7 feet. This arrangement indicates that the 4x6 sills would be substantially overloaded according to Building Code allowances. A 6x6 used with this arrangement would be ample.
3. You have indicated that you will use 4x4 corner posts, and your sketch indicates that the uprights between the corner posts to form the divisions between the uprights would be a single 2x4. It looks as though you meant to use across the top of the uprights (this member would support the outside end of the roof joists) a single 2x4. This 2x4 would only be strong enough if it were set with the 4-inch dimension upright. All of this would make pretty light construction, even though it complies theoretically with the law. The upright studs in the low claphoard wall for railing should be set 16 inches from center to center, and a double 2x4 plate used over the tops of them, if you intend to use the light construction above indicated and are not sure that the

Mr. R. O. P. Sellers ——— 2

September 24

rights between the sash will bear directly over the studs in the solid wall below. To give your porch the substantial character that most people want, I recommend that you use 4x4's in at least two places in the length of the front between sash, as nearly as possible uniformly spaced, that these 4x4's be continued clear down to the 4x8 sill and that two intermediate cedar posts instead of the one shown be provided between the 4x4's. Then that you use across the tops of the 4-4x4's, including 4x4 corner post, a 4x4 or 2-2x4's, both set with the 1-inch upright. There are a number of ways of framing this proposition, and if you prefer to have one cedar post in the center, and the sash would come right so that you could put a 4x4 post directly over this cedar post, then you could build it in that manner and provide a 4x8 with 6-inch dimension upright over the tops of the 3-4x4 posts to support the outside ends of the roof joists. Then the filled in material for sash and solid railing would be completely non-bearing and you could arrange it most any way you wanted to.

I take it that the present portion of the piazza is in good condition and well able to take the additional load of the glassing-in, and the above is written on that basis. If not, it should be made so.

Very truly yours,

Inspector of Buildings
