Laverdiere's Drug JStore 7.0. Bor 1014 Waterville, Me.

Re: 930 Brighton Ave.

Dear Sir:

On Jan. 21, 1982, this department issued you a permit for a change of use from a furniture retail store to drug store with alterations at 930 Brighton Ave.

In review of your plan, a 572 sq. ft. space is set aside for a "Action Family Arcade". Please remember in the E-1 Zone only two amusement devices are allowed as an accessory use. This was explained to Mr. Robert M. Marden of your office on two occasions before the pennit was issued.

If you have any questions on this matter, please call.

Sincerely,

P.S. Hoffses Chief of Inspection Services

HF 193 Brighton Avenue-I

December 13, 1951

Mrs. Arthur I. Hamilton 832 Brighton Avenue Portland, Maine

Dear Mrs. Hamilton:

Apparently you have purchased the property at 832 Brighton Avenue some times this year, and it seems important that we advise you what transpired with relation to the enclosing of the "bix. away" between house and garage, so that you may be fully aware of the situatio, my defects which may exist with regard to compliance with the Building Code and ., haza is which may exist. Perhaps the former owner has explained these situations to you or even given you copies of our several letters to him concerning the matter.

As required by law a certificate of occupancy was issued from this department when the dwelling was completed in 1949. In November, 1950 the former owner applied for an alteration permit to glass in the open breezeway between dwelling and garage. Whentho building was first built, since the breezeway was open without enclosing walls certain fire protection on the inside wall of the garage covering the area of the breezeway was applied, but since the breezeway was open, just an ordinary door was provided butween the breezeway and the garage.

Ca the application for the later permit the owner said that the existing wooden door between breezeway and garage would be changed out to a standard fire resistive door with self-closing device (this is to keep the door normally closed) and that the frame of the worway would be covered with metal, this latter provision being a requirement of law so that ... would be practically excluded from the woodwork of the woor and of the frame of ... doorway to provide better fire projection of the house should a fire take place in the attached garage.

upon inspection our inspector reportec/different stages of the work that a fire door and metal-clad rame had not been provided, but even more important that a warm air duct of the heating system in the house had been extended to the garage, the bottom of the outlet being about at the level of the garage floor.

On March 14, 1951 I wrote to the then owner, telling him about the matter of providing the fire door with self-closing device and the tightly covered metal frame of the dorway; also the hazard of having the warm air duct at the garage floor level and suggested a remedy as follows:

"Gasoline fumes are fairly explosive of course and act a good deal like water in some respects in that the fumes are heavier than all and, the efore, when free in a given space always seek the lower level. Imagine the possible consequence if raso line funes, due to a leak in the carburetor or otherwise, should build floor of the garage and, in case the furnace should not be operating or for ; heat were coming through the duct, the gasoline fumes would normally enter the duct. and travel commward to the furnace with dire results at some later time, perhaps several months after the leak cocurred, and the furnace fire should be started, whether coal, oil or whatever fuel you may have.

"You can have this condition remedied by extending this duct (making sure that it is tight and that the place where the duct passes through the wall of the garage. is tight also) to a height of about 4° or higher above the level of the garage floor.

s. Arthur I. Hamilton-December 13, 1951 "I am told that you are either trinking of selling the property shortly or have sold it, and we are most anxious that the new owner or occupant shall not fall heir to this hazard. Will you be good enough to have this dangerous condition corrected before April 16, 1951?" Prior to that letter our inspector found that the metal covered door was en the job but not hung, that some metal covering had been provided for the door frame but it was not tight enough to exclude air, and that no change had been made in the warm air duct entering the tarage. He explained to the wife of the former camer. about tightening the metal covering of the door frame and about providing a selfcloser for the door. At two subsequent inspections the inspector reported that nothing more had been done, and on the last that you were the new owner. This matter has dragged on for a long time, probably through no fault of yours, and we shall not pursue it further, feeling that these matters of safety are of major interest to yourself and your family. If you are not owner of the property now, will you be kind enough to notify us of that fact an' who the owner is?

If you 'nve questions about those matters, please feel free to ask them.

Very truly yours, -

Warren McDonald Inspector of Buildings

McD/S

nn 632 Brighton Avenue-I //15/51/ATH

March 14, 1951

Mr. Willard Fenderson 632 Brighton Avenue Portland, Maine

Dear Mr. Fenderson:

On March 12 Inspector Hamilton found a most hazardous condition relative to your louse and attached garage at 832 Brighton Avenue which has not been noted before, although the condition may have been in existence and not discovered at the time of final inspection.

I refer to a warm air duct from the furnace in the cellar which he says runs into the garage and discharges approximately at the garage floor level. It is quite certain that the heating man who put in this warm air duct in this location did not realize the hazard to your building and your family, and helieve me that is an over present hazard.

Mascline fumes are highly explosive of course and act a good deal like water in some respects in that the fumes are heavier than air and, therefore, when free in a given space always seek the lower level. Imagine the possible consequences if gasoline fumes, due to a leak in the carburator or otherwise, should build up on the floor of the garage and, in ease the furnace should not be operating or for some reason no heat were coming through the duct, the gasoline fumes would nomarily enter the duct and travel downward to the furnace with dire results at some later time, perhaps several conths after the leak occurred, and the furnace/should be started, whether coal, all or whatever fuel you may have.

You can have this condition remedied by extending this duct (making sure that it is tight and that the place where the duct passes through the wall of the garage is tight also) to a height of about 4 above the level of the garage floor.

I am told that you are either thinking of selling the property shortly or have sold it, and we are most anxious that the new owner or occupant shall not fall helr to this hazard. Will you be good enough to have this dangerous condition corrected before April 16, 1951?

Inspector Hamilton reported that you had the fire door on hand, that the door frame was covered, but the door had not than been hung. He went over with Hrs. Fenderson the matter of making all joints in the metal work covering the door frame, tight, and that of providing a device to keep the door closed. These joints in the metal should be locked joints. No candiff that is not what you have, you should get a metal worker to take the standard frame put it on correctly. It is important that all air shall be substitutially excluded from both the door and the frame of the door, otherwise the fire resistive qualities of the door are much less than they should be.

Very truly yours,

Warren McDonald Inspector of Buildings

WMcD/G

832 Brighton Avenue-I February 21, 1951 Mr. Willard M. Fenderson 832 Brighton Avenue Portland, Maine Dear Mr. Fenderson: Referring to my letter of November 6 with relation to the permit for glassing-in the breezeway between your house and garage at 832 Brighton Avenue, our inspector has made several visits to the building and has found that, although the fire resistive covering had been put on the wall between the garage and breezeway, the door frame between breezeway and garage had not been covered with metal and the door had been taken off, presumably to be covered. In fact on February 10 cur inspector talked with Mrs. Fendersch who said that Mr. Hannaford was doing the work on the door and frame. Since you are using the garage and do not have the protection replication for the remait, becomes important that you proceed to complete the job without delay. Perhaps there is some good reason for not completing the door and frame, but ordinarily even in these times of scarce materials it seems as though the work should have been completed in all this time since Notanter 6. this time since November 6. At any rate I shall have to ask you to notify this office on what date you feel sure you can have the frame of the door properly covered with metal all over and the properly metal-clad fire down in place with suitable self-closing device. To give that information please phone inspector Hamilton at this office some week day morning other than Saturday between 8:00 and 8:30 A.M. We certainly shall expect you to have this job completely finished in compliance with the law before March 1. this job completely finished in compliance with the law before March 1, Very truly yours, Warren McDonald Inspector of Buildings WicD/G

Brighton Avenue-I November 6, 1950 Mr. Willard M. Fenderson 832 Brighton Avenue Portland, Maine . Dear Mr. Fenderson: Building permit for glassing in existing open breezeway between dwelling and garage and providing fireproofing and fire door between enclosed breezeway and garage is issued, herewith, subject to the following: Your information added to application for the permit on November 3, copy of which you have herewith, 9-ye that existing wooden door and frame will be covered with metal and made self-closing. From a former inspection our inspector reports that the cor between breezeway and garage is an ordinary wooden door with lain glass panel, if there are any other panels in the door other than the glass panel, or, if there are any other panels is the door other than the glass panel, or, if the door when covered with metal would be less then 1 3/8" thick in any part except the glass panel, then the existing door will not prove suitable to comply with the Building Code and a new door will be necessary. If the present door is suitable, it will be necessary to change out the plain glass panel so wire blass and carefully cover the moldings around the panel with metal as the entire door will also have to be covered, including the addermotal as the entire door will also have to be covored, including the edges, and using locked joints as provided for standard fire resistan. fire doors in Section 303c4 of the Building Cods. The frame of the door is to be similarly covered with locked joints and lapped or flashed beneath the fire resistive covering of the partition on both sides so as to practically exclude air from the woodwork of the core. Very truly yours, Warren McDonald Inswator of Buildings WMcD/G

COPY

CITY OF PORTLAND, MAINE Department of Building Inspection

Certificate of Occupancy

Issued to Willard M. Fenderson

This is to rertify that the building, premises, or part thereof, indicated below, and built—stated Education and Education Avenue
under Building Permit No. 48/702, has had final inspection, has been found to conform substantially to requirements of Zoning Ordinance and Building Code of the City, and is hereby approved Partion of Building and Indicated below.

Approved Occurrence

Appr

APPROVED OCCUPANCY

Entire Building

One-family Dwelling House & Garage

Limiting Conditions:

This certificate supersedes certificate issued

Inspector of Buildings

BP 48/702-I September 24, 1948 Mr. Willard M. Fenderson R. F. D. Box 34 Westbrook, Maine Subject: Certificate of occupancy for new dwelling at 830-83% Brighton Avenue Dear Sir: You may consider this letter as a temporary certificate of occupancy for the use of your new dwelling at the above location. As soon as the installation of the heating system has been completed and the other matters which our inspector pointed out to you have been taken care of, upon notification from you, we will make another inspection and issue the final certificate of occupancy if everything is found in order at that time. Very truly yours, Inspector of Buildings AJS/S

AP 830-834 Brighton Ave.-I Hay 10, 1943 Subject: Permit for new dwelling and garage Mr. Willard H. Fenderson at 830-834 Brighton Avenue R.F.D. Box 34 Wostbrook, Maine The remait for the above work is issued herewith based on the plans filed with the application and subject to the following: Dear Sir: 1. Instead of the 3-2x8's indicated for support of the call of the domer, no less than a 1x12 is required. Since this timber will be deeper than the 2x8's in the floor fracing, the extra depth may be allowed to project above the floor and the stude of the call supported on it. 2. The framing of the main wells of the building at the place line is to be done as shown on sectional plan filed May 8 instead of as shown in Section BB on plans first files. of the mil supported on it. of chimney, firestopping etc. which it is impractical to show on plans or in the application for permit. Cogardless of whether or not those are thus shown, it is your responsibility and that of your contractor to provide work in accordance with those gonesibility and that of your contractor to provide work in accordance with the sure of what quirements. Therefore it is important in case of question that you make sure of which is required before proceeding with the work. Unpleasant as it may be for all involved, is required before proceeding with the work done contrary to building Gode requirements we have no option but to require that work done contrary to building Gode requirements and the altered to comply. notice to this office for two inspections. The first or "closing-in" inspection is required before any lath or wallboard is applied to walls, partitions or ceilings and required before any lath or wallboard is applied to walls, partitions or ceilings and required before any lath or wallboard is applied and the plushing and electric wiring after framing and firestopping has been completed and the plushing inspection is installed and approved by the proper inspectors. The second or "final" inspection it is installed and approved by the proper inspectors. The second in she and before it is installed and approved by the proper inspectors. The second in order at this time, the certification of decling purposes. If everything is found in order at this time, the issued cate of occupancy, without which use of the building is illogal, will be issued Very truly yours, Inspector of Buildings kJS/S thi Kr. Reymond King King Street Wostbrook, Haine
