CITY OF PORTLAND, MAINE  
BUILDING INSPECTOR

MAY 10 1954  
DEPT. OF PUBLIC WORKS  
CITY OF PORTLAND, MAINE

May 19, 1954

TO: Bryan O. Whitney, Commissioner of Public Works

FROM: Warren McDonald, Inspector of Buildings

SUBJECT: Moving building from 924 Br. ... Ave. to outside City limits

We have application for permit to move 1-car frame garage 12' x 24' 6" x 15' 3" high as above.

We are checking the proposition against Zoning Ordinance and Building Code and will delay issuance of the permit until we hear from you that the permit for moving through the streets is cleared sufficiently. When that point is reached, will you be kind enough to write "OK to issue building permit" on the bottom of this memorandum and return.

P.39/532-I

April 18, 1939

Mr. F. Alfred Theriault,  
110 Central Street,  
Westbrook, Maine

Dear Sir:

The following matters are called to your attention in connection with the construction of a dwelling house for Eugene P. Lyman, at 924 Brighton Avenue, building permit for which was issued to you yesterday:

We believe particular care should be exercised in framing the partitions on the west side of the central hall. The partitions on the other side of the central hall are indicated to be the bearing partitions being over the girder in the cellar. The westerly partitions, therefore, are non-bearing partitions and I believe care should be exercised to make sure as far as possible, consistent with stiffness of the partition itself, that these non-bearing partitions are so framed that there will be little likelihood of their bearing any of the load of the floor or partitions above. Some builders would say that it would have been better to have provided a girder in the cellar under both of these longitudinal partitions, thus making them both bearing partitions, but there seems to be strength enough as the plans are drawn.

I have got the impression that you are to support the front piazza on concrete piers as well as the rear piazza. We seem to have no record of the spacing of these piers, the sills proposed for the sills and the girders at the second floor and roof level on either piazza, neither do we seem to have a record of what you propose to use for floor joists either in the floors or roofs of both piazzas. It would be well for you to give us this information completely or at least go over it with Mr. Sears of this office before you get that far.

The following notations concerning Building Code requirements are made for your benefit, but I cannot guarantee that this statement covers all of the requirements of the Building Code for framing, of course:

Sills and corner posts to be all one piece in cross section; corner posts, studs in outside walls to go down and rest upon the sills and the studs of bearing partitions to go down and rest upon the girder without any intervening wood; double end headers over all ordinary windows and doors and larger heads over mullion windows and other larger openings; jack (short) studs under both ends of all header-doubled floor joists under all partitions running the same way as the joists; no less than 1 x 5 cross bridging; incombustible fire stops around the chimney at each floor level, usually formed by cast iron beneath the headers around the chimney, nailed on below so as to fit out snug against the chimney wall without fastening to chimney wall and refuse mortar or fairly fine gravel filled in from above; separate permit required for the heating plant may be issued only to the installer; notification required of readiness to close in after fire stops are all in, plumbing and electrical work to be covered up, installed and inspected, inspection by this office and green tag if approval left at the job before any closing in whatever is done;

Mr. F. Alfred Theriault—2

April 18, 1933

notification required for final inspection when the essential structures of the building are completed, inspection to be made and certificate of occupancy issued from this department before the building is occupied; when a walking strip is used on the sides of the center girder in the cellar, bottom of walking strip must not be lower than the bottom of the girder.

If you are in doubt as to the requirements of the law in any particulars, please call on this office for information before proceeding with that part of work.

All concrete blocks used on the job are required to have cast in each block the brand of the manufacturer which shall have first been registered in this department.

Very truly yours,

Inspector of Buildings

MCD/H

NOTES

4/3/39 - Due to lack of space location of garage is proposed. Should probably make it impossible to have in front of house at all of garage. Mr Young is to look into possibility of locating garage on other side of house + settling for the existing as possible to cater to lot. He is to have short time provided by Public Health Department where he has decided what to do with location

and bring in new location plan. Mr Young is so recently transferred the identity of the land on which the car garage was built last year to another party. Jimmy is from the 1/2' frontage of the entrance is also a frontage of 33 1/2' for this existing part of the lot. A.J. J.
