Subject: Application for building permit for
new frame dwelling at 1077-1079 Brighton
Avenue

Gentlemen:

The permit for the above work is issued herewith subject to the following:

1. Care should be taken to see to it that the requirements of the Building Code that all parts of the foundation wall shall extend at least 4' below the finished grade of the ground or to ledge if it is found at a lesser depth is complied with.

2. The column supporting the first floor framing at the corner of the stairwell for cellar stairs is required to be at least 4" in outside diameter instead of 3" as shown.

3. While no size is given for the pipe columns used to support the front vestibule and the side platform, these columns are required to be no less than 3" in outside diameter.

4. This permit is of course issued on the basis that all requirements of the Building Code as regards framing and otherwise will be followed, but since we have no knowledge as to how familiar the contractor may be with these requirements, we would suggest that in case of any doubt as to any of them that he get in touch with this office before going ahead, so that costly changes may not be necessary to provide compliance with the law if errors in construction are found at time of the close-up inspection.

5. In case the contractor is not aware of it, he is reminded of the necessity for an inspection by this office before any of the walls, partitions or ceilings are lathed or covered from view otherwise and after the electrical wiring and the plumbing work has been completed and approved by the proper inspectors. A certificate of occupancy from this department is also required before the building is occupied, and a request for a final inspection of the building should be made to this department as soon as all necessary details have been completed.

Very truly yours,

Inspector of Buildings

AJB/J

CC: Mr. Albert R. Farrington
