Mr. David Brooke
U. S. Plywood Corp.
777 Third Avenue
New York, N. Y.

cc: Kibler & Storer, 74 Main St., Yarmouth
cc: U. S. Plywood Corp., 119 Bishop St.

Dear Mr. Brooke:

This is to notify you that although we do not issue a certificate of occupancy for additions to existing buildings, we have found that your 82' x 152' sprinklered concrete block addition with wood roof meets our Building Code and Zoning Ordinance requirements.

Very truly yours,

Gerald E. Mayberry
Director of Building & Inspection Services

INSPECTED BY [Signature] (OVER)

CITY OF PORTLAND, MAINE
IN THE BOARD OF APPEALS

#5-pd 4/12/66

66/36

Granted 4/28/66

MISCELLANEOUS APPEAL

United States Plywood Corp., owner of property at 107-119 Shop Street under the provisions of Section 24 of the Zoning Ordinance of the City of Portland, hereby respectfully petitions the Board of Appeals to permit construction of a cement block addition 82'x152' on right hand side of present building. This permit is presently not issuable under the Zoning Ordinance because: (1) The addition will be located only about four feet from the side lot line instead of the minimum side yard of 15 feet required as per Section 12-C-1 of the Ordinance applying to the I-2 Industrial Zone in which the property is located; (2) The rear wall of this addition will be located less than one foot from the rear lot line, which abuts the railroad right of way, instead of the minimum rear yard of 17 feet being provided as required by Section 12-C-4 of the Ordinance; (3) There will be only 13 parking spaces provided instead of the 28 parking spaces required for a warehouse of this size.

LEGAL BASIS OF APPEAL: Such permit may be granted only if the Board of Appeals finds that enforcement of the terms of the Ordinance would result in undue hardship and desirable relief may be granted without substantially departing from the intent and purpose of the Ordinance.

United States Plywood Corp.
By: Harold C. Heegan
APPELLANT

DECISION

After public hearing held April 28, 1966 the Board of Appeals finds that enforcement of the terms of the Ordinance would result in undue hardship and desirable relief may be granted without substantially departing from the intent and purpose of the Ordinance.

It is, therefore, determined that such permit may be issued.

BOARD OF APPEALS

William G. Hinkle
Harold C. Heegan
Joseph J. King

cc to: Corporation Counsel

Gentlemen:

A building permit to construct a cement block addition 82'x152' on the right hand side of present building at the above named location is not issuable under the Zoning Ordinance for the following reasons:

1. The addition will be located only about four feet from the side lot line instead of the minimum side yard of 15 feet required for by Section 12-C-1 of the Ordinance applying to the I-2 Industrial Zone in which the property is located.
2. The rear wall of this addition will be located less than one foot from the rear lot line, which abuts the railroad right of way, instead of the minimum rear yard of 17 feet being provided as required by Section 12-C-4 of the Ordinance.
3. There will be only 13 parking spaces provided instead of the 28 parking spaces required for a warehouse of this size.

We understand that the owners of the proposed building would like to exercise their appeal rights concerning these discrepancies. Accordingly an authorized representative should come to this office to file the appeal on forms which are available here.

Approval of the plumbing inspector will be needed for the new location of the septic tank disposal system.

Very truly yours,

Gerald E. Mayberry
Building Inspection Director

GEM:m

CITY OF PORTLAND, MAINE
IN THE BOARD OF APPEALS

April 25, 1966

TO WHOM IT MAY CONCERN:

The Board of Appeals will hold a public hearing in the Council Chamber at City Hall, Portland, Maine on Thursday, April 28, 1966 at 4:00 p.m. to hear the appeal of United States Plywood requesting an exception to the Zoning Ordinance to construct a concrete block addition 82'x152' on right hand side of building at 107-119 Bishop Street.

This permit is presently not issuable under the Ordinance because the addition will be located only about four feet from the side lot line instead of the minimum side yard of 15 feet required by Section 12-C-1 of the Ordinance applying to the I-2 Industrial Zone in which the property is located; the rear wall of this addition will be located less than one foot from the rear lot line, which abuts the railroad right of way, instead of the minimum rear yard of 17 feet being provided as required by Section 12-C-4 of the Ordinance.

All persons interested either for or against this appeal will be heard at the above time and place.

Re: United States Plywood

Dear Mr. Dahlgren:

Thank you for the information booklet concerning the properties of Douglas Fir Plywood. Approval is given to use the $\frac{3}{4}$ inch thickness Douglas Fir, Western Larch, or Southern Pine plywood for roof sheathing over roof timbers spaced at not over 30 inches on centers at the above project.

If any plans are made to change joist spacing other than shown on original plans then these joists would need to be refigured.

Very truly yours,

Gerald E. Mayberry
Building Inspection Director

BRIEF SPECIFICATIONS FOR U. S. PLYWOOD ADDITION

1. Excavation--and granular fill for the entire project including ~~removing the existing~~ septic tank and leaching field and relocate to new location as shown.
2. Concrete--foundations and floor slab shall be of size and reinforced as shown on the drawings. Concrete will be 6 bag mix testing 3,000 per square inch in 28 days. We have included 6 mill polyethylene vapor barrier under floor slab along with termite soil poisoning, 5 year bond.
3. Masonry--block shall be concrete block as shown on the drawing and laid using best practice and methods. Block reinforcing will be galvanized durawall standard duty, truss type.
4. Carpentry work--shall include all materials not furnished by the owner; namely, curbs, cants, blockings, nailers, bridging, sills, rough hardware, joist hangers. Material by the owner will be laminated beams, wood joist, boots for beams at exterior wall, skylights, and corrugated plastic at the side wall.
5. Plumbing--shall include all necessary labor and materials to re-route sewer line to opposite side of building and patch boiler room floor upon completion of work. Excavation by general contractor.
6. Electrical--fixtures shall be equal in type and number to those at existing warehouse and tied into existing service.
7. Painting--shall consist of 2 coats Hydrocide colorcoat by Sarnoborn on all exterior block. All new and exposed wood shall be given 1 prime coat of Woodlife and 2 finish coats exterior grade paint. New doors shall be painted on both sides with 2 coats exterior grade paint.
8. Roofing--shall be John-Manville Aquadon Smooth Surface Roofing #151 or an equal.
9. Fire door--shall be double class "A". North American Roll up doors 12' x 12'.
10. Structural and Misc. Steel--shall be as shown on drawings namely; wide flange column column saddles, plywood bumpers, angles on corners of all door openings including floor, angles and tie straps at end walls and all miscellaneous bolts.
11. Overhead doors--shall be of size shown on drawings. Existing door(side) shall be relocated to rear of new addition. New 20' x 14' door shall be high lift, chain operated commercial type, as by Overhead Door Company, rail and stile, LeBonite L-30 panel. 1 panel of wire glass.
12. Asphalt paving--shall be 2" hot mix asphalt over the entire area in front of the building and a 3' trough for storm drainage at the side of the building.
Paving shall be over existing un-disturbed paving and on a well compacted 6" gravel base on new and disturbed area.

Gentlemen:

Permit to construct a one-story masonry and wood frame addition 82'x152' to the existing storage warehouse is being issued subject to compliance with Building Code requirements as follows:

1. The sprinkler system required for this addition under Section 702.4.b will need to be installed under a separate permit to be issued to the actual installing contractor.
2. It is understood that the occupancy of this addition will not exceed 20 persons at any one time and therefore two means of egress from this addition will not be required. However, there will need to be one pass door as the large overhead doors do not qualify as a required means of egress. It is understood that this pass door will be installed in the wall facing Bishop Street.
3. It is further understood that this building is to be unheated. If heat is installed in the future it will need to be installed under a separate permit to be issued to the actual installing contractor.
4. As per our discussion with Mr. Dahlgren of Kibler & Storer Co. there is to be a roof scuttle constructed to comply with Section 402.9.
5. As per Section 801.1.b of this code the masonry separation wall between the existing warehouse and the addition is to extend at least 4 inches beyond the front and rear walls of the building.
6. Roof purlins on the front two lays of the building being 2x12 inch members spaced at 16 inches on centers and spanning about 22 feet will need to be of lumber grade marked for not less than 1500 F.S.I. fiber stress.

Very truly yours,

Gerald E. Mayberry
Building Inspection Director

GEN:m F.S.: Statements of design are to be provided for the structural steel, the reinforced concrete lintels, and laminated wood beams as well as the inspection certificate needed before shipment as stated in Sec.1503.2.12.2.

INSPECTION COPY

MEMORANDUM FROM DEPARTMENT OF BUILDING INSPECTION, PORTLAND, MAINE

May 3, 1960

Location*****111-121 Bishop St.

Before tank and piping is covered from view, installer is required to notify the **Building Inspector's Dept.** of readiness for inspection and to refrain from covering up until approved by the **Building Inspection Dept.**

This tank of 275 gallons capacity is required to be of steel or wrought iron no less in thickness than #14 gauge; and before installation is required to be protected against corrosion, even though galvanized, by two coats of tar, asphaltum, or other suitable rust-resisting paint, and special protection wherein corrosive soil such as cinders or the like.

Pipe lines connected to underground tanks, other than tubing and except fill lines and test wells, must be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tank will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.
