RE: Holmes Distributors Site Plan  
Riverside Industrial Park

DEPT OF BUILDING INSPECTION  
CITY OF PORTLAND

Gentlemen:

Our client, Holmes Distributors of 510 Cumberland Avenue Portland, Maine, has purchased the former Bangor Drug Company building at 216-224 Riverside Industrial Parkway. Much of the building will remain as a warehouse as it is today, but the existing office space will be enlarged. Presently there are 32 paved parking spaces. In order to comply with the requirements for the additional office space plus a limited amount of customer parking, an additional paved parking area will be constructed. This will be constructed in two phases. When Phase I is complete there will be a total of 66 parking spaces. When Phase II is complete there will be a total of 93 parking spaces.

The soils on the site are silty clays with some sand. Please find attached a statement of the geology on the site based upon data from the Maine Geological Survey and five test pits dug on January 21, 1987. Based upon the soils data the good condition of the existing parking area, it is our opinion that the new parking area can be built as long as good construction practices are adhered to. Plans for the work call for up to two feet of new bank run gravel and three inches of asphalt paving in high traffic areas. All disturbed areas will be loamed and seeded or landscaped with a variety of plant materials. Previous construction disposed of surplus soils on the site of the proposed parking area. Some erosion of these soils has taken place, but the proposed construction will eliminate this existing problem.

There are easements on the property for municipal sanitary sewers and storm drainage structures. None of the proposed work will disturb the municipal facilities. The existing storm drain structures have been designed for a 50 year storm per information obtained at the city engineers office. Therefore, since present recommendations only call for runoff rate control

for a 25 year storm, it does not seem necessary to provide detention facilities for a runoff rate increase of only 1.6 cfs for a 25 year storm.

We believe the maps and plans being submitted are self explanatory, but feel free to call us if you have any questions concerning the proposed site changes.

Very Truly Yours,  
TRC Associates

R. G. Esterberg, PE

STATEMENT ON THE GEOLOGY  
 HOLMES DISTRIBUTORS RIVERSIDE INDUST. , PARK  
 PORTLAND MAINE

The entire site is underlain by the Presumpscot Formation, a predominantly silty clay formation with minor amounts of sand. The surficial geology of the area was mapped by W.B. Thompson (Reconnaissance Geology of the Portland West Quadrangle, Maine; Open File Map, scale 1:24,000; Maine Quadrangle Survey, 1976.) Also log No. C-289 near the Maine Turnpike, which lies about 100 to 200 feet west of the site shows the following:

FORMATION	MATERIAL	THICKNESS	SITE DEPTH
Marine Deposits	Gray-brown, moist, medium clayey silt	15'	15'
Presumpscot Formation	Gray, wet, soft silty clay	15'	30'

This information is from Maine Basic Data Report No. 9 by Glenn C. Prescott, Jr., 1976; U.S. Geological Survey in Cooperation with the State of Maine Public Utilities Commission.

The 5 test pits, Table 1, all contained the marine deposits of silty clay; also a shovel sample from approximately two feet below the land surface in a gully showed silt and clay as described below:

SHOVEL SAMPLE #1 (Gully cut ±100ft northeast of northeast corner of building)

FORMATION	MATERIAL	REMARKS
Marine Deposits	Silt and clay with a minor amount of very fine sand; light gray to dark yellowish brown; may be slightly bedded or laminated	Frozen; bedding, if present destroyed during thawing

These deposits are relatively impereable and allow only extremely slow movement of water through them. Runoff from rain and snow melt is and will remain high under natural conditions. The material is relatively soft and easy to move. Where topography is abrupt, the deposits erode easily and local landsliding has been reported in the Presumpscot Formation.

January 1987  
E. Bradley

TABLE 1  
LOGS OF TEST PITS

1 Rock Color Chart: Geologic Society of America following Munsell Color  
Company colors found in U.S. National Bureau of Standards SPECIAL  
PUBLICATION #SP 440 (1976)

TEST PIT #1  
DUG 1-21-87

FORMATION	MATERIAL	DEPTH INTERVAL (feet)	REMARKS
Fill	Silt and clay loam; mottled in places; dark brown to olive gray mixed or distributed irregularly	0.0-4.8	Frozen at surface only; Fill thickness varies 3' to 5'
Marine/ Estuarine Deposits	Silt and some clay; a minor amount of very fine sand; mottled moderate yellowish brown to light olive gray; sand is with silt in yellowish brown places	4.8-10.2	Sample at 10.2'
	BOTTOM OF HOLE	10.2	Dry after 1½ hr.

TEST PIT #2  
DUG 1-21-87

Soil	Silty clay loam; dark yellowish brown	0.0-1.5	
Marine/ Estuarine Deposits	Silty clay with minor amount of very fine sand; mottled moderate yellowish brown to light olive gray; sand is with silt in yellowish brown places	1.5-3.2	
Marine/ Estuarine Deposits	Silty clay; moderate yellowish brown with slight mottling to grayish olive (10 Y 4/2) <sup>1</sup>	3.2-9.5	Sample at 7.0'
Marine/ Estuarine Deposits	Silty clay, grayish olive	9.5-12.5	Wet below 9.7±' Sample at 12.0'
	BOTTOM OF HOLE	12.5	

Note: Water level 11.4 feet below land surface about 1½ hours after dug; very slow seepage entering pit.

TEST PIT #3  
DUG 1-21-87

FORMATION	MATERIAL	DEPTH INTERVAL (feet)	REMARKS
Soil	Silty clay loam moderate yellowish brown (10 Y 5/4) <sup>1</sup>	0.0-1.7	
Marine/ Estuarine Deposits	Silt and clay with minor amounts of very fine sand; mottled yellowish brown to grayish olive (10 Y 4/2) <sup>1</sup>	1.7-2.7	
Marine/ Estuarine Deposits	Silt and clay; small amount of very fine sand in places, micaceous; dark yellowish brown to grayish olive with occasional dark brown staining in leaves about 1/8" thick	2.7-7.5	Sample at 5.8' to 6.0'
Marine/ Estuarine Deposits	Same as from 2.7 to 7.5 feet except largely grayish olive	7.8-8.5	Dry
BOTTOM OF HOLE		8.5	

TEST PIT #4  
DUG 1-21-87

Soil	Silty clay loam; moderate yellowish brown	0.0-1.3	
Marine/ Estuarine Deposits	Silt and clay with traces of very fine sand; dark yellowish brown to grayish olive; some mottling	1.3-6.3	
Marine/ Estuarine Deposits	Silt and clay; very slightly sandy (very fine) in places; grayish olive; trace of mottling where sandy	6.3-7.5	
Marine/ Estuarine Deposits	Silt and clay; a few widely scattered very fine silty sand lenses, discontinuous, less than 1/64" thick; medium dark gray except rusty brown in silty sand lenses	7.5-10.5	Wet from 7.5' to 10.5' Sample at 10.5'
BOTTOM OF HOLE		10.5	

TEST PIT #5  
DUG 1-21-87

FORMATION	MATERIAL	DEPTH INTERVAL (Feet)	REMARKS
Soil	Silty clay loam; moderate yellowish brown	0.0-1.4	
Marine/ Estuarine Deposits	Silt and clay with traces of very fine sand; mottled moderate yellowish brown to grayish olive	1.4-6.9	
Marine/ Estuarine Deposits	Silt and clay, medium dark gray	6.9-7.5	Sample at 7.0' Dry
	BOTTOM OF HOLE	7.5
