Inquiry-9-13 Abbott St.

June 23, 1959

Mr. Daniel T. Shaw
25 Higgins Street

Dear Mr. Shaw:

Regarding your inquiry concerning alterations to former stable attached to dwelling at the above named location to change it to garage use, it appears that the following construction would be necessary to meet Building Code requirements:

1. The proposed 8 inch concrete block foundation wall would have to extend to such a depth that the bottom of the poured concrete footing at least 8 inches deep and 10 inches wide on which it is required to be supported would be not less than 4 feet below the finished grade of the ground adjoining it at all points. Unless the grade of the ground were to be raised, this would apparently be considerably deeper than the bottom of the existing concrete pier which has been uncovered.
2. Provision would need to be made to anchor the existing sill of the building to the concrete block wall by at least one-half inch diameter bolts spaced not over 6 feet on centers.
3. The garage side of the wood wall where it adjoins the dwelling would need to be covered with sheets of cement asbestos board at least three-eighths of an inch in thickness or gypsum wall board at least one-half inch in thickness with joints between sheets tightly cemented and sealed.
4. A self-closing standard fire-resistant door or a solid core plywood door at least one and three-quarters inches thick would need to be installed on any opening between garage and dwelling.
5. Garage would need to be provided with a concrete floor or one of equivalent approved fire-resistant material.

Very truly yours,

Albert J. Sears
Inspector of Buildings

DATE OF REPLY 6/23/59 REPLY A.J.S.

MEMO

9-13 Abbott Street

May 24, 1960

This lot owned by Daniel T. Shaw contains 10,170 square feet. On the lot he has a single family dwelling house and a former barn attached, the barn being one story and a half with the first floor about 3 feet above the grade.

The owner had thought of moving one half of the first floor toward Allen Avenue, building a partition between this half and the balance of the barn together with a floor over this half about 5 feet above the present first floor level, thus forming garage space for a single car at about the level of the ground.

At the time of inspection he had already (without a permit) excavated at the rear wall of the barn, constructed a footing of concrete (his word is taken for that), and on top of the footing a concrete block wall about 24 inches high without mortar between the blocks. This wall is out of line and out of level.

The barn is framed with a pitch roof with gable end toward Abbott Street. However the floor joists in first floor and in second floor run in the opposite direction from the rafters leaving much to be desired as to ties for the roof plates, a deficiency which cause the upper parts of both side walls to lean out a bit.

After going over all these defects with Mr. Shaw, he decided that he would abandon the project, and said that he would proceed with no more work requiring a building permit, without first securing the permit.

Memorandum from Department of Building Inspection, Portland, Maine
AP - 11 Abbott Street

June 2, 1964

Mr. Erlon S. Varney,
11 Abbott Street

Dear Mr. Varney:

Permit is being issued to construct a two-car frame garage 24'x24' at the above location but a permit cannot be issued in the future if it is desired to rigidly connect the garage to the dwelling by a breezeway or otherwise as the dwelling has a foundation below frost whereas the garage will rest on a concrete slab that is subject to frost action.
