October 7, 1931

Mr. Harold Meserve
1917 Washington Avenue
Portland, Maine

Dear Sir:

Enclosed is the building permit covering alterations to your buildings at 1917 Washington Avenue.

The 3-2x6s which you have indicated that you will use through the center to support the roof timbers and in turn supported by a post in the middle of the span is not heavy enough. It will be necessary for you to use at least a 6x8 in its place with the eight inches vertical.

Please note also that you have agreed upon your application to line the inside of the garage on the side toward the new shed from floor to roof boards with so-called asbestos lumber $\frac{3}{8}$ ths of an inch in thickness with all joints filled with cement mortar. You should not get this asbestos lumber confused with gypsum wall board which is not satisfactory, and please make sure that it is at least $\frac{3}{8}$ ths of an inch in thickness. If asbestos lumber $\frac{3}{8}$ ths of an inch cannot be procured in the City, it will be satisfactory to use two layers of $\frac{5}{16}$ ths inch board. If there is to be a doorway between the garage and the new shed, an approved fire door must be provided in the opening. This fire door should be covered with metal all over with locked joints, and the door frame on both sides of the doorway must be likewise covered with metal. The door is required to be self-closing, that is normally closed and kept closed by a suitable door check, spring or weight.

If the roof timbers of the new shed are to get their bearing on the existing wall of the garage, additional studs should be provided between those already existing so as to make the wall stronger.

Please be governed accordingly.

Very truly yours,

Gold Spring Farm Inn
