CITY OF PORTLAND, MAINE
DEPARTMENT OF BUILDING INSPECTION

Room 21, City Hall

Gentlemen:

In connection with the installation of oil burning equipment as indicated in statement below, please sign this statement and return to this office as promptly as possible so that the permit may be issued if everything else is found in order, retaining the copy for your file.

Very truly yours,
(Signed) Warren McDonald
Inspector of Buildings.

* * * * *

1. This statement is to become as much a part of the application for a permit to cover installation of oil burning equipment for Deering Village, Inc. at 434-436 Allen Avenue, as though written on the application form.

2. A switch or other manual control capable of completely stopping flow of oil to the burner will be provided, such device to be so located as to be conveniently reached and operated without being exposed to danger that may exist at or near the burner. If feasible this switch or similar device will be located at or near the top of the cellar stairs. In case the burner is of a type without electrical controls, a quick-closing valve will be provided in the oil supply line so located and arranged that the valve may be manually closed from the top of the cellar stairs, or outside of the room where the burner is located or from outside the building.

3. A quick action, self-closing valve designed to close at 160 to 165 degrees Fahrenheit will be provided in oil supply line.

4. Readily accessible shut-off valves, one of which may be the self-closing valve indicated in No. 3 if capable of manual operation, will be installed in oil supply line near each burner and close to supply tank. Shut-off valves will be installed on each side of oil strainers which are not a part of the oil burner unit or which are connected to oil burner unit without intervening piping or tubing. Shut-off valves will be provided both on the discharge side and the suction side of oil pumps, if any, which pump directly to the burner but which are not a part of the burner unit.

5. If there is to be a shut-off valve in the discharge line of an oil pump, a suitable pressure relief valve will be connected into the discharge line between pump and shut-off valve and arranged to return surplus oil to the storage tank or to by-pass it around the pump.

The above mentioned plans were approved by the Board of Health on September 16, 1941. In the letter of approval dated September 16, 1941, the Board of Health, Deering Village, Inc., 477 Congress Street, Portland, Maine

Gentlemen:

We have issued four permits for as many dwelling houses, one dwelling house on each lot at 434-436 Allen Avenue (Lot 73), 444-446 Allen Avenue (Lot 75), 438-442 Allen Avenue (Lot 74), and Lot 78 Woodmere Road, based on a standard plan referenced in our file as Deering Village, Inc., Standard Plan A.

In order to use these standard plans for these four houses and in connection with future applications, it is necessary that the plans be made more complete than they are now. On this account it is required that before you lay the sill on any of these four houses and before application is filed for any other permits to be based on these standard plans, that you revise the standard plans clearly so that they may be understood taking care of the following details:

Show the framing and supports of the rear porch, including the fastenings of the supports to the foundation piers and the fact that the foundation piers will extend at least four inches above the grade of the ground and at least four feet below the finished grade of the ground. Apparently the front platform is to be of masonry, if so the foundations for it should be shown to extend at least four feet below the grade of the ground, if the platform is wood information should be shown similar to that required for the rear platform.

The standard plan shows the grade of the ground sloping off toward the rear of the building. It should be clearly indicated on the standard plan that the foundations at all points are to extend at least four feet below the finished grade of the ground adjoining the wall.

There are several discrepancies between the applications and the standard plans. The application shows 2x8 second floor joists (presumably providing for a future second floor, or perhaps the flooring to be laid now), the plans show 2x6 ceiling joists hung from the rafters. If the second floor is intended for future development, the natural place for the stairs would be over the cellar stairs.

The plans show the second floor joists to be on 11 foot spans, but it is evident that the spans of these joists over the living room will have to be more than this, also which way these joists are to run should be shown and which partition is to act as a bearing partition to support the inside ends of the second floor joists over the living room, also how the loads of this bearing partition are to get down to the ground through the first floor frame. There is more than one way that this can be done, and the proposed method should be shown in detail on the standard plans.

Deering Village, Tenn., -----2

September 18, 1941.

Two flues are shown in the chimney, one of them four and a half inches in least dimension while the minimum allowed in the Building Code is the inside dimension of a nominal 8x8 flue lining.

Very truly yours,

WMO/H

Inspector of Buildings

APPLICATION FOR PERMIT PERMIT ISSUED

Class of Building or Type of Structure Single Permit No. 1887

Portland, Maine, Sept. 11, 1941
