STATEMENT ACCOMPANYING APPLICATION FOR BUILDING PERMIT

	for 2-car garage at 467 Auburn Street Date October 1, 1951
1.	In whose name is the title of the property now recorded? Rose E. Barker
2.	Are the boundaries of the property in the vicinity of the proposed work shown clearly on the ground, andhow?stakes
3.	Is the outline of the proposed work now staked out upon the ground? will call If not, will you notify the Inspection Office when the work is staked out and before any of the work is commenced?
4.	What is to be maximum projection or overhang of eaves or drip / 6"
5.	Do you assume full responsibility for the correctness of the location plan or statement of location filed with this application, and does it show the complete outline of the propsed work on the ground, including bay windows, porches and other projections? yes
6.	Do you assume full responsibility for the correctness of all statements in the application concerning the sizes, design and use of the proposed building? yes
7.	Do you understand that in case changes are proposed in the location of the work or in any of the details specified in the application that a revised plan and application must be submitted to this office before the changes are made?
	Carle F Bark

Memorandum from Department of Building Inspection, Portland, Maine

467 Auburn Atreet—Construction of a 2-car garage for and by Rose E. Rarker—10/8/51

Building permit for construction of a two car wood frame garage 201 x 241 on the lot with your dwelling at the above location is issued herowith. It is noted that the height of the building at the plate and at the ridge as given in the application for permit will provide just the allowable maximum height of twelve feet at a point halfway between the plate and the ridge. Therefore care should be taken to make sure that the height of the plate above the grade at the front of the building and the pitch of the roof are provided so in relation to each other that this allowable maximum of twelve feet will not be exceeded.

AP 467 Auburn Street-I

August 28, 1951

Mr. Earle F. Barker 467 Auturn Street Portland, Malue

Bear Mr. Berker:

Building permit to make certain alterations to your dwelling at 467 Auburn Street is issued herewith. Our uncerstanding of part of the work to be done is that you plan to provide a double mullion window at the approximate location of an existing rear entrance door to the building, this door to be discontinued and closed up. Presumably this will mean that the header over the mullion window will be on a span of five feet or greater and in such a case the double 2x4 header indicated in the application will not be adequate. Without information as to the loads which the header will be called upon to support, it is impossible for will be required for this purpose. We will be glad to check just what is needed before the header is installed if you will furnish us with information as to any floor, wall and roof loads that are carried by the wall on it at the time of the "closing-in" inspection, notice for which you are opening from view, but that would be a bad time to find out that comething other than what had been provided was needed.

Very truly yours,

Warren McDonald Inspector of Buildings

AP 467 Auburn Street-I

ATH ESS PRICE AH, AH, BS

June 27, 1946

Mr. Earle F. Basker 467 Auburn Street Portland, Maine

Subject; Building permit for changing out sedar post foundations of welling house to a concrete foundation will at 487 Adburn Excet

Dear Mr. Barker:

Your application carries only the bare information as to the exterior foundation wall and indicates that you are now to provide a collar under the building where there has been no usual collar before.

Involved with this change will also be the matter of supporting the interior of the house where no doubt the posts or whatever has been supporting the interior of the building will have to be removed, the interior being temporarily supporting together with the chimney while the excavation is being made.

The Building Code controls details of the new supports to be provided both of the interior of the building and of the chimney. The extension of the chimney downwards requires a tile lining on at least that part of the flue, whether the flue above is lined or not, and requires a cast iron clean-out door and frame at the bottom of the chimney flue.

I do not know whether or not you are to construct the councation wall around the outside and then excevate or excavate the cellar first and build the wall, but it would be well for you to file here, before you get very far, a framing plan of the first floor showing the supporting girder through the center, if any, the size of it (if the cross-sectional dimensions of the girder are not the same; show which cross-sectional dimension is upright), and show the material, size and spacing of columns, posts or piers that you propose to support the girder. Thus we will be able to determine the span and check the strength of the girder on the spans which you propose. also the material and size of the supports of the girder. Also, you should show whether or not there are any partitions over this girder which in turn support the second floor as all of this makes up weight to be carried down through the girder and through the posts to the ground.

Very truly yours,

Anspector of Buildings

WMoD/S
