Mr. W. C. Perry
32 Berwick Street
Portland, Maine

Dear Sir:

Replying to your inquiry of October 7th concerning the requirements of the Building Code in case you decide to build an enclosed passageway between your house and garage at 32 Berwick Street.

It is understood that your garage is about four feet from the dwelling house, and that this passageway would be about seven feet long and four feet in width; also that there would be a door from the passageway to the garage and another door from the passageway to the dwelling house. Protection is required by law to cover the full width and height of the proposed enclosed passageway. This protection may be placed upon the garage side of the wall between the garage and the passageway, or it may be placed upon the passageway side of the wall between the passageway and the house. This protection must consist of metal lath with Portland cement plaster, or a $\frac{3}{8}$ th inch thickness of so-called "asbestos lumber" fully cemented at the joints. This asbestos lumber is not stocked in Portland in the $\frac{3}{8}$ th inch thickness, but two thicknesses of $\frac{3}{16}$ th inch stock which may be had in Portland will be acceptable. The most logical place to put this protection is on the garage side of the wall between the garage and the passageway. In this case, you would need protection for an area seven feet in one dimension and the full height of the passageway in the other dimension with the exception of the doorway between the garage and the passageway. This door between the garage and the passageway should be a self-closing fire door set in a door frame covered with metal all over. The door itself must be covered tightly all over with metal, and all joints in the metal should be locked. By the term "self-closing" is meant a door that is normally closed and kept closed by means of a door check, spring hinges, or other suitable device.

There is also a requirement with regard to the threshold of this fire door which is difficult to explain in a letter. It hinges upon the condition of whether or not you will step up as you pass from the proposed passageway to the dwelling house. From my understanding of the case, I understand that you will step up. If there are one or more steps leading from the passageway into the dwelling house, no special provision is necessary for the threshold of the fire door. If, however, the floor of the passageway is level with the floor of the dwelling house or if the floor of the dwelling house is below the floor of the passageway, the threshold of the fire door must be raised at least six inches above the level of the garage floor.

I trust that this letter will answer your questions. If it is not understood, I shall be glad to explain the requirements more clearly if you will come to this office at some time during the Inspector's office hours named above.

Very truly yours,

(R) GENERAL RESIDENCE ZONE
