Memorandum from Department of Building Inspection, Portland, Maine

3 Chester Street--Building permit for alterations to dwelling for and by Ralph Norton Sr.
8/30/57

Building permit for construction of an enclosed porch 8 feet by 22 feet on rear of dwelling at the above named location is issued herewith based on plan filed with application for permit but subject to the following conditions:-

1. No information as to spacing of concrete piers supporting porch has been given. Permit is issued on the basis that besides the piers at the corners there will be at least two intermediate ones, thus giving a maximum span of about 7 feet between them. Of course, if there are splices in the sill, piers will be needed wherever splices occur; but in any case the maximum span between piers is not to exceed 7 feet.

2. On the basis that enclosure of porch is to be a mud wall with no openings larger than required for the usual windows or door, a double 2x4 plate with double headers and jack studs for each opening; will be adequate; otherwise plate will need to be no less than 4x6.

Caplt. 3 Chester St.—Construction of porch in violation of Building Code

Mr. Ralph Norton
3 Chester St.

Dear Mr. Norton:

It was surprising and disappointing to learn that you had started construction of a porch attached to your dwelling at the above location without applying for and securing the building permit required by law.

Our field inspector reports that the framing so far erected is not far from compliance with Building Code requirements therefor, and that you have stopped work, inquiring of him what to do next.

If you will now do everything possible quickly to place the job in compliance with the law, we are not disposed to proceed against you for violation of it. You should proceed to have made a plan of the porch showing the size, spacing and spans of all framing members, showing the material, size, depth below ground and height above ground and also the location of proposed foundation piers, also all other details controlled by the Building Code. Then on the same or another plan show the location of the proposed porch with relation to your dwelling and to all of the property lines, and file the plans as blueprints with all of the information on them printed from the original and bearing the name of the maker and his address, or by carbon copy duplicates (in the latter case the original and one carbon copy to be filed with the application for the permit) ~~and file the plan~~ with application for a permit to construct the porch. It appears that the new porch would cover up a cellar entrance, and that you propose to relocate this entrance. Both the plan and the application for the permit should show the materials and construction as well as the location of the new cellar entrance.

Inasmuch as the work is now in violation of the Building Code, it is important that you have the permit applied for in order before August 30. Otherwise, we shall be compelled to seek the help of the Corporation Counsel of the City with relation to the violation of the law.

Our inspector noticed quite a number of various materials and articles such as water tanks, and parts of a motor lying on the open lot. The property is in an R-5 Residence Zone under the Zoning Ordinance where such a use of property is not allowable. It is necessary that you have all of these materials or articles cleared up and disposed of in an orderly manner in compliance with the Zoning Ordinance before August 30, 1957, or it will be my duty to call the attention of the Corporation Counsel of the City to this zoning violation as to what steps should be taken to secure compliance with the law.

Very truly yours,

Warren McDonald

Dear Sir,

Dear Mr. Boston
Creater St. has promised
to build machine shop (with a
garage). It was stopped once
but has continued to build.

Has written papers and
never read while permit was
granted. It is very funny
that he can do as he pleases
and the people can not.

Perhaps you don't know
about it. So if you look
into matter some thing can be
done. It is impossible to see
radio now when he is working
in his cellar, which is full
of machinery of all kinds.
After he makes arrangements
then new machine shop it will
be impossible to treat anything.
Do not let this rest on hand an
going law!

2-39-07

Lot 70 Chester Street.

I asked him for a framing plan of this roof but he got out without giving it to me. I did not call him as there were so many other questions in regard to this. It seems he is a machinist for M. B. Bourne & Son who are doing defense work, and it seems that he does some work sharpening tools, etc. at home. In the past he has done this work in the basement of his home, but as I should judge is planning a work bench in the side of this garage, he also let something slip about storage in upper part of building

August 13, 1941

Mr. Harry S. Norton,
5 Chester Street,
Portland, Maine
Dear Sir:

After our minor difficulty in July 1940 when we found that you had substantially erected the frame of a building on your property at 5 Chester Street without first securing a building permit, and you had agreed that you would make a location plan and apply for the permit following my letter of July 17, 1940, I was surprised to find that you have proceeded with erecting most of the outside walls, although you still have no permit.

You have applied for a permit (on August 11th) indicating that the side wall of the garage would be three feet from the side property line, that the side property line is marked by iron stakes, and that the overhang of the eaves would be 12 inches, also that you propose to have a "French" roof on the building, also that you would use 1 1/2" iron pipes for foundation.

Mr. S. Norton did not know where the iron stakes marking the boundary lines were located, and I could not find them. The side wall of the garage measured less than 30 inches to the stakes of a leaning wire fence which may or may not be a property line. I could discover no iron stakes under the hills. There may be some concrete piers under the hills as indicated in a previous report of our inspector, but as far as I could see the hills were lying flat on the ground. By the way one or more lengths of sill-boards built up of some thin and piece of lumber contrary to the Building Code which requires the sills to be all one piece in cross section.

Your permit clerk asked you for a fitting plan of the roof which you failed to leave here.

Of even more importance is the fact that you and Mrs. Norton both indicated some auxiliary use of the building for manufacturing or packing than which tools are now being processed in the cellar of your home and which I understand are used in your daily work. In addition you made some mention of storage in the upper part of the building, that and the proposition of a French roof indicating a second floor, which, however, is not indicated in your application for a permit.

I can see the auxiliary uses which you propose in this building are in violation of the zoning ordinance since your property is located in a General Business Zone where no such uses unless they can be established as essential necessary to the dwelling house use on the same lot are allowable.

It ought not to be necessary for me to advise you not to proceed any further with the work, so it must be clear to you that all that has been done thus far is in violation of the Building Code, and I am sure you do not want to put in the position of proceeding against you on that score any more than I want to.

August 13, 1941

If you are willing to file a statement here with the application for the permit that there will be no second floor in this building, that it will be used for a garage and no other purpose and will change your application to indicate the usual hip or gitch roof, I suggest the following procedure so that you may get along with the building: (1) Definitely locate on the ground the correct side property line, and if that does not show a clearance of two feet between the line and the overhang of the eaves proposed out down the amount of overhang, move the building over so that it will, notify the office and getting a check of the location before proceeding any further; (2) if the location is found to be correct change out the portions of the plans that are built up with more than one member and introduce the foundation plans, having filed your statement about the use of the building and made the change in the application concerning the roof, notify us so that the building may be checked again; (3) then, if everything is found in order, we ought to be able to issue the actual permit for the building.

I realize that you are very busy and this may seem a long drawn out procedure. It need not be however, and if it is it is caused by the fact that you have proceeded without first securing a permit.

Very truly yours,

Inspector of Buildings

Ed/H

STATEMENT ACCOMPANYING APPLICATION FOR BUILDING PERMIT

for one car garage Date 8/11/11
at 3 Chester Street

1. In whose name is the title of the property now recorded? Ralph S. Horton
2. Are the boundaries of the property in the vicinity of the proposed work shown clearly on the ground, and how? iron stakes
3. Is the outline of the proposed work now staked out upon the ground? Yes If not, will you notify the Inspection Office when the work is staked out and before any of the work is commenced? Yes
4. What is to be maximum projection or overhang of eaves or drip? 12 in
5. Do you assume full responsibility for the correctness of the location plan or statement of location filed with this application, and does it show the complete outline of the proposed work on the ground, including bay windows, porches and other projections? Yes
6. Do you assume full responsibility for the correctness of all statements in the application concerning the sizes, design and use of the proposed building? Yes
7. Do you understand that in case changes are proposed in the location of the work or in any of the details specified in the application that a revised plan and application must be submitted to this office before the changes are made? Yes

July 17, 1940

Mr. Ralph Norton,
Chester Street,
Portland, Maine

Dear Sir:

A building, perhaps intended for a garage, is being built on Lot 70 Chester Street without a building permit having been secured as required by law, and you are reported to be the person responsible for it, or at least the owner of the land.

There are also some details of construction work which do not comply with Building Code requirements, and there is a question about the location.

It is necessary that you get in touch with this office, preferably by coming here sometime between the hours of nine o'clock and three o'clock some day other than Saturday, and see what may be done about this situation.

This work is illegal, of course, and not to be continued in any way unless and until a permit is secured from this department.

I shall expect to have you come to the office at least by July 22, 1940.

Very truly yours,

Wich/H
