SECTION FOR BEAM

Details of Job

November 7, 1951

Mr. Parsons MacVane,  
Long Island, Me.

Dear Sirs

The Portland Stove Foundry Co. has started an application for a permit to cover installation of a warm air furnace in your dwelling house on Long Island, but we find that the chimney to which the heater is to be connected has not been properly constructed in that the opening for the smoke pipe is so located that the top of the smoke pipe would be but 3 inches from the eaves above it.

The Building Law provides that 15" shall be provided between the top of a smoke pipe and combustible material above it, if possible, but in no case that this distance shall be less than 10". In case the distance is less than 15" and not less than 10", a shield of asbestos cloth, three times the diameter of the smoke pipe in width is required to be suspended on wire hangers half way between the smoke pipe and the roof above.

Under these circumstances I am unable to issue the permit for the installation of the heater and unable to accept the chimney as it is.

From my understanding of a report from our inspector on this matter, I suggest that you have your mason put out the new foundation wall to a sufficient depth so that the chimney flue may be extended downward such a distance that the full 15" clearance may be provided above the smoke pipe.

Please advise us promptly as possible what you propose to do in this situation.

Very truly yours,

(Signed) Warren McDonald,  
Inspector of Buildings.

CC Portland Stove Foundry Co.  
CC David Darling, Long Island

Mr. Darling: I should like very much to talk to you about this and other details of this work as soon as it is convenient for you to come to this office.

Warren McDonald
